*U. S. Dept. of Agriculture
Library
Washington 25, D.C.*

The dancing Daffodils are a marvel of beauty in earliest spring. Their varying tones of yellow, from softest cream to boldest gold, seem especially appropriate to the new season.

Daffodils— Narcissus

Daffodils and Narcissus do well in almost all soils and locations and are a permanent addition to the garden. Plant them where they can be left alone to increase from year to year.

DEANNA DURBIN

A group planting of this beautiful new variety on the bank of a stream, or tucked between shrubs and evergreens, makes one of the loveliest of spring pictures.

3 for 60c **12 for \$1.95** 100 for \$14.75

Deanna Durbin

Daffodils and Blue Grape Hyacinths combine to make an eye-filling picture in the spring garden.

50 Blue Grape Hyacinths

THE PINK DAFFODIL

To the experienced and novice gardener alike there is a special pleasure in growing the rare variety Mrs. R. O. Backhouse. This unusual show flower is extremely long-lasting.

3 for \$1.10 **12 for \$4.00** 100 for \$31.25

The Pink Daffodil

GIANT TRUMPET DAFFODILS

The giant yellow trumpet Daffodils seem to be "blowing their own horns," and well they may, for they are among the most cheering and lusty of all spring flowers. Hardy and dependable, they lead the parade of Narcissus, making a superb picture by themselves or combined with other early-flowering bulbs.

STRAWBERRY PLANTS

FALL PLANTING FOR EARLY SPRING CROP

Tests have shown that planting strawberries in the fall and keeping the runners off will produce an early spring crop, probably two or three weeks ahead of ordinary plantings, and which, needless to say, will bring top prices. This method, of course, will require more plants, but it saves a year in getting a crop, besides giving an earlier crop at much higher prices, thus bringing back to you that much ^{more} quickly the cost of the plants and bringing them into production. Needless to say, the cost of bringing them into production will be less, too, due to the shorter time it takes.

Plants grown in a mild climate such as most of southern California are to be avoided, as they don't get enough cold weather to make them fully dormant which is necessary to produce good, disease resistant, heavy bearing plants. Naturally, it is poor economy to set such plants to save a little on the price, as the cost of the plants is the smallest item in bringing a patch of berries into production, and you can't afford to plant any but the best.

We are offering the following northern grown plants for delivery Nov. 1 to 20:

	FOB L. A. 1000	FOB No. Calif. or Ore. 5000 up, per M	Number plants available
Shasta.....	\$25.00	\$22.00	75,000

Lassen.....	25.00	22.00	30,000
Cupertino.....	25.00	22.00	15,000
Northwest.....	35.00	32.00	30,000
British Sovereign..	27.50	25.00	15,000
Narcissa.....	25.00	22.00	10,000
20th Century.....	27.50	25.00	
Utah Everbearing...	27.50	25.00	
Utah Centennial....	27.50	25.00	

In California, add 3% state sales tax; in Los Angeles, 3½%

For shipment after Dec. 20 a discount of \$3 per 1000 is allowed, but to be assured of getting any plants you must order at once, with remittance. NOTE: this discount does not apply to 20th Century, Utah Everbearing and Utah Centennial from Oregon.

Shasta, Donner, Tahoe, 20th Century, Utah Everbearing and Utah Centennial from Oregon available for fall planting from Oct. 25 to Nov. 15.

OFFERINGS SUBJECT TO PRIOR SALE. PRICES SUBJECT TO CHANGE WITHOUT NOTICE.

UTAH CENTENNIAL EVERBEARING STRAWBERRY

During the summer of 1940 several everbearing strawberries were being tested in a plot in Utah, in which were planted the varieties Minnesota 1166 (Evermore), Streamliner, Rockhill, 20th Century, and Lindalicious. The variety Utah Centennial developed from a chance seedling in this plot.

In production and length of bearing season there is little difference between Utah Centennial and 20th Century, but Utah Centennial is about a week earlier, larger, more uniform in shape, much better flavor and with a larger sugar content, than 20th Century.

Growers in the intermountain area like the Centennial better than any other variety they have tried out. A grower named Matsumoto, in Idaho, when seeking a new variety, tried Centennial on the recommen-

(over)

dation of his County Agent, Frank E. Hackler, who says: "We took a chance on this variety but now we use the one-fourth-acre plot as a demonstration unit. Many other growers are now interested in the Utah Centennial strawberry." Mr. Matsumoto has five acres of other strawberry varieties, including the President, Marshall and Streamliner, but he finds none of these equals the Utah Centennial. He picked off the first blossoms to get the plants well established, and the first berries were marketed in July and the crop was in heavy production through September. Even the runners made good sized berries.

A report we received early in June stated that many 20th Century, Utah Everbearing and Utah Centennial were planted in the Florin district last season, but orders for the coming season were coming in from there for much larger quantities of the Centennial than for the others. Plants of Centennial planted there in November last fall were producing the finest of fruit in early June.

20th Century and Utah *Everbearing* seem to be identical. The name *Utah Everbearing* is said to have started when some Utah growers started to ship 20th Century berries under the name Utah *Everbearing*.

NORTHWEST STRAWBERRY (WASH. 220)

Northwest strawberry was developed at Western Wash. Exp. Sta. and released for trial in districts where the Marshall can no longer be grown successfully because of the presence of the virus disease known as Yellows. Northwest has shown strong resistance to this disease. It has in its ancestry some of the most outstanding varieties for yield, quality and disease resistance. Trial plots were established at four Wash. Exp. Stations. In all these the plants made strong growth and produced good crops, exceeding the crops obtained from Marshall.

Typical berries are long conic in shape, except in the earliest pickings when many are broadly wedge-shaped. With normally vigorous plants berry size has been large to very large in early pickings, dropping off gradually to medium size at end of season. Small size has not been a problem at any time. Color of berries has shown some variation, being excellent at Puyallup and Centralia, somewhat darker at Vancouver and slightly lighter at Mt. Vernon. At Puyallup the color is bright crimson with a high gloss which has distinct eye appeal. The flesh is firm, not hollow or only slightly so in the largest berries, and uniform light red throughout. The large green cap is easily removed in the field, leaving no stem. It has typical strawberry flavor without the undesirable sourness or bitterness found in some varieties.

The ripening season is late, beginning about a week after first picking of Marshall. This characteristic may help it to escape blossom damage by frost, and will extend the marketing season. *Northwest* is a single crop variety, showing no tendency to the *everbearing* habit.

In experimental processing, Northwest has been frozen, both whole and sliced, with sugar and with syrup added. In blind sampling it has been rated from slightly inferior to equal to Marshall in flavor. In almost all cases, sliced samples have been superior to Marshall in appearance, the slices holding their shape better because of firmer texture. Frozen whole berry samples have been exceptionally good. Canned samples have been rated superior to the best canning varieties.

Above excerpts are from Mimeo. Cir. No. 149, The Northwest Strawberry, which you may be able to obtain by writing to the Western Washington Experiment Station, Puyallup, Wash.

BRITISH SOVEREIGN STRAWBERRY

This variety has become very popular in British Columbia and Washington, and is worthy of trial.

EVANS FROSTGUARD INFRA-RED HEATER

The Evans Frostguard, in simple terms, is a device for protecting berries, vegetables, flowers, etc. from frost damage by means of infra-red heat rays, long recognized as one of the most effective heating agents. It was developed at the Michigan State College. Using kerosene to produce necessary heat energy, it transforms this energy into powerful infra-red heat rays which are absorbed by the plants over a wide area. The temperature of the crops within the Frostguard's protective zone is thereby raised appreciably, enabling them to resist an otherwise damaging frost to which they might be subjected.

Saved His Strawberry Crop

"You may be interested in the operation of the Frostguard which I have used on three acres of my strawberries this spring. Early in May the temperature dropped to 22 deg. one night and my strawberries came through in good shape. In fact, I believe that due to the saving of my crop that one night the machines will have nearly paid for themselves already. While I lost about 2% of my crop it was probably due to my starting the machines a little late and the fact that it was quite a cold night. I expect to use more of these machines next year." Roy Gish, Rensselaer, Indiana

If you are in an area which may be subject to fall or early spring frosts, the Frostguard might save your early blossoms or fruit and thereby save your early crop which would bring you high prices, and thereby soon pay for itself. It has been used at Cupertino, Stockton and elsewhere in California.

If you are interested further, full information and literature will be gladly furnished upon request.

HOLLAND AT ITS BEST!

THE PEACH. \$1.35 per doz.

DUKE OF WELLINGTON. \$1.75 per doz.

SCARLET LEADER. \$1.35 per doz.

From the many varieties of Darwin Tulips grown in Holland we have selected the 6 varieties here illustrated, which are the best that Holland offers in color, size and form of bloom. Each variety is a prize-winner in its color. The bulbs are specially selected for exhibition.

TEN BLUE RIBBON DARWIN VARIETIES

Darwins are usually the mainstay of a Tulip planting. They are large and cupped, with very long stems that make them perfect for cutting. Against a dark hedge Darwins make an unforgettable picture; use them, too, in clumps in the perennial or shrub border and in beds by themselves. Borders of pansies and forget-me-nots set them off to perfection.

COLLECTION G

10 bulbs each of the Ten Blue Ribbon varieties illustrated to the left and right.

100 for only \$7.25

COLLECTION GG

5 bulbs each of the Ten Blue Ribbon varieties
50 for \$3.85

This sampling of Darwin Tulips brings you a beautiful blend of colors. Each variety in the Blue Ribbon collection is packed and labeled separately to enable you to make whatever color combinations please you. Packed and wrapped in Holland in special perforated bags, these bulbs are handled with extreme care and will reach you in the best condition.
